COLLEGE COURSES IN SCOTLAND

2021

ESP is a collaboration of Scotland's colleges and industry partners established to increase Scotland's capability and capacity to deliver the right skills for the energy, engineering and construction sectors to meet industry demand.

By working in a cohesive partnership Scotland's colleges demonstrate a responsiveness and collective capability to provide the skills required by industry.

Following the publication of a number of key policy documents ESP has been identified by stakeholders as the key delivery partner to take forward a number of new priority areas.

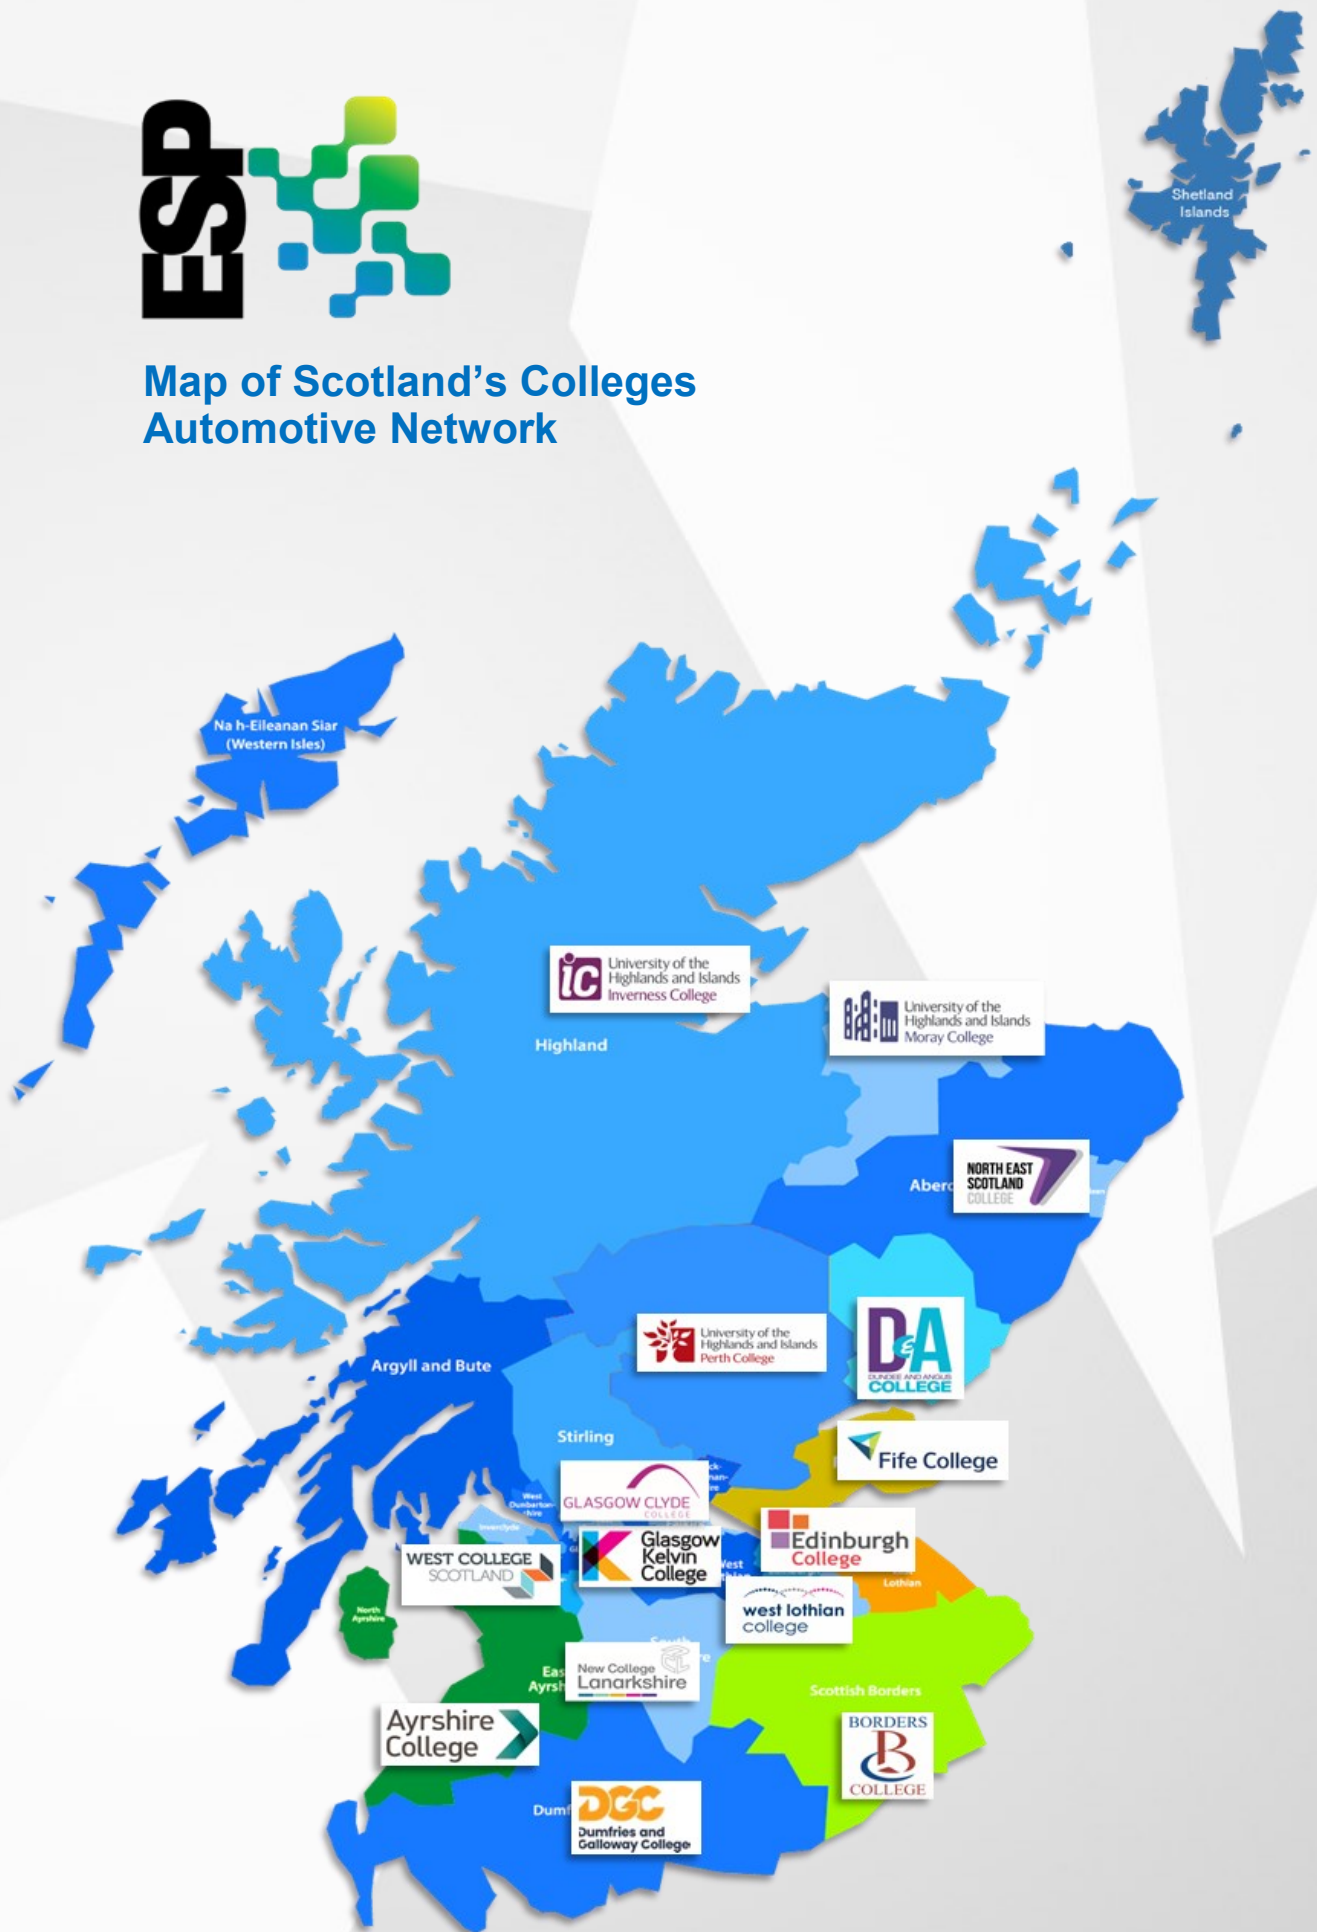

As part of our extended remit covering a number of emerging technologies and based on feedback from industry and our college members an Automotive Training Network was established.

The network has agreed a number of priorities, including the emerging need for safe working with electric vehicles, with the aim to ensure Scotland is at the forefront of skills development in support of the Automotive sector.

This brochure provides an overview of relevant training available through the network.

Safe Working with Electric Vehicles

With Scottish Government's focus and incentives for Electric Vehicles (EVs) there will be a significant increase in the number of EVs in the public domain. This will result in increased demand for maintenance and repair work from garages.

ESP and Transport Scotland are working in partnership to support independent garage staff with training for EVs.

Find out how your local college can support independent garage staff through IMI and City & Guild accredited courses and the use of Electude lock-out desktop trainers.
